

Making Sense of MacArthur Bates Communicative Development Inventories (MB-CDIs)

About

The MacArthur Bates Communicative Development Inventories (MB-CDIs) capture parents' knowledge of their child's emerging language skills. Used with children ages 8-37 months, the MB-CDIs can assist school personnel and families in identifying steps toward building a full foundation of language. University of Colorado - Boulder's Early Language Outcomes Lab will offer an overview and special considerations of the assessment to equip you to guide families in documenting their child's vocabulary and communication growth.

The MB-CDIs are Language Equality and Acquisition for Deaf Kids (LEAD-K) Michigan recommended assessments.

Audience:

This workshop is for Michigan school personnel and early interventionists who work with children who are deaf or hard of hearing, ages 8-37 months.
